This project is going to be a Bug tracker for Applications that users are building. They can make "Guards" for each application. Then proceed to make a list for whatever they want (features, bugs, ideas, etc). Then they can add a list of task that need to be done for those list. The users will also be able to add other users to their guards, so they can collaborate.

Also wordage will be changed in majority of the website. I have yet to come up with something intriguing.

Oooh... Looking to track all those "features" (bugs). Well I think you found the option for you!

Lets start squashing those bugs! Sign-up below.

Oooh... Looking to track all those "features" (bugs). Lets start squashing those bugs! Sign-up below.

Wordage will be change to something more specific. This is going to a slider where it'll present the different features of the website.

Want to upgrade your Guard? Check-out the subscriptions below.

Developers always love addition "features"...

\$7 /monthly  
or  
\$84 /yearly
